

# ABSTRACT OF THE DISCLOSURE

A sleeve device has a main body and a retainer device. The main body has a first end portion having a hollow interior and a through hole communicating with the hollow interior, and a second end portion. A diameter of the first end portion is smaller than a diameter of the second end portion. A diameter of the first end portion is slightly smaller than a diameter of the retainer device. The retainer device is inserted in the first end portion of the main body. The retainer device has a through aperture to match the through hole of the main body. A steel ball is inserted through the through aperture of the retainer device and the through hole of the main body.
